Product Owner, Equivalence Checking Europe / United States

OneSpin is looking for highly motivated Product Owner to work as a link between Customers, Sales, R&D, Product Marketing, and Application Engineering. As a Product Owner you will work closely with customers to define the product road-map and grow the OneSpin Equivalence Checking platform.

ONESPIN SOLUTIONS

Just think for a moment. How many digital devices have been entering your life recently? Smart watches, TVs, cars, wearables of all kinds - they all run on hardware. To stay ahead of the competition, chips must evolve quickly and be extraordinarily reliable. That's where OneSpin comes in – our software tools help the world's most innovative companies to create bug-free digital integrated circuits. OneSpin is a pioneer of advanced formal techniques to solve practical verification challenges. Focusing on formal verification of chip designs allows us to provide unique, award winning solutions for tough problems, based on a leading, high performance technology platform. Operating at the sharp end of technology, our work has a direct impact on the development processes and products of our customers across the electronics industry. Together we create the next generation of electronic products soon to hit the worldwide market.

RESPONSIBILITIES

As Product Owner for our formal equivalence checking products, you are responsible for the economic success and growth of the product by maximizing the value of the product to be developed and for the quality of the product. The main tasks of the Product Owner are:

- Collect requirements, specifications, and technical design documents to create detailed and comprehensive product roadmaps.
- Management of the product backlog to drive the product roadmap, manage customer expectations, and grow the product.
- Maximizing the value of the development team by estimating, prioritizing, planning, and coordinating R&D and testing activities.

- Tracking progress, managing conflicts, and providing visibility and transparency to all stakeholders.
- Communicating the product vision and strategic value both internally and externally.
- Ensure the quality of the product by working with QA to define thorough test plans.
- Create product and marketing documentation to highlight features and drive adoption of the product.

Therefore, your main task is to work out a strategy for your product and to coordinate all the departments involved so that your product becomes a success.

REQUIREMENTS

The successful candidate will possess the following combination of education and experience:

- BS/MS degree in Computer Science, Engineering
- 3+ years of relevant experience in roles such as Product Owner or Technical Project Manager
- Experience with synthesis flows such as Xilinx Vivado™, Synopsys Synplify®, and Intel Quartus®
- Experience with hardware development in VHDL/Verilog is a strong plus
- Ability to communicate suitable and persuasively with a variety of audiences - internal vs. external and business vs. technical
- Ability to work in an environment with a multitude of cross-functional and geographically dispersed teams
- Must understand the business value of engineering decisions and how they affect the life cycle of the product
- Experience with Agile software development (SCRUM)
- Possess strong analytical skills with excellent problem-solving abilities
- Flexible, comfortable with change
- Effectively manages and can thrive with ambiguity
- Self-motivated/independent/resourceful
- Location United States or Europe
